

AUTOMATED REMOTE MECHANISM (ARM™)

ADD RELIABLE, AFFORDABLE WIRELESS REMOTE TO ANY CARRIER. ONLY FROM JERR-DAN.

The Automated Remote Mechanism (ARM) wireless remote system is exclusive to Jerr-Dan and is the ultimate in convenience. The system runs any controls on the side of your carrier, making your job safer and easier.

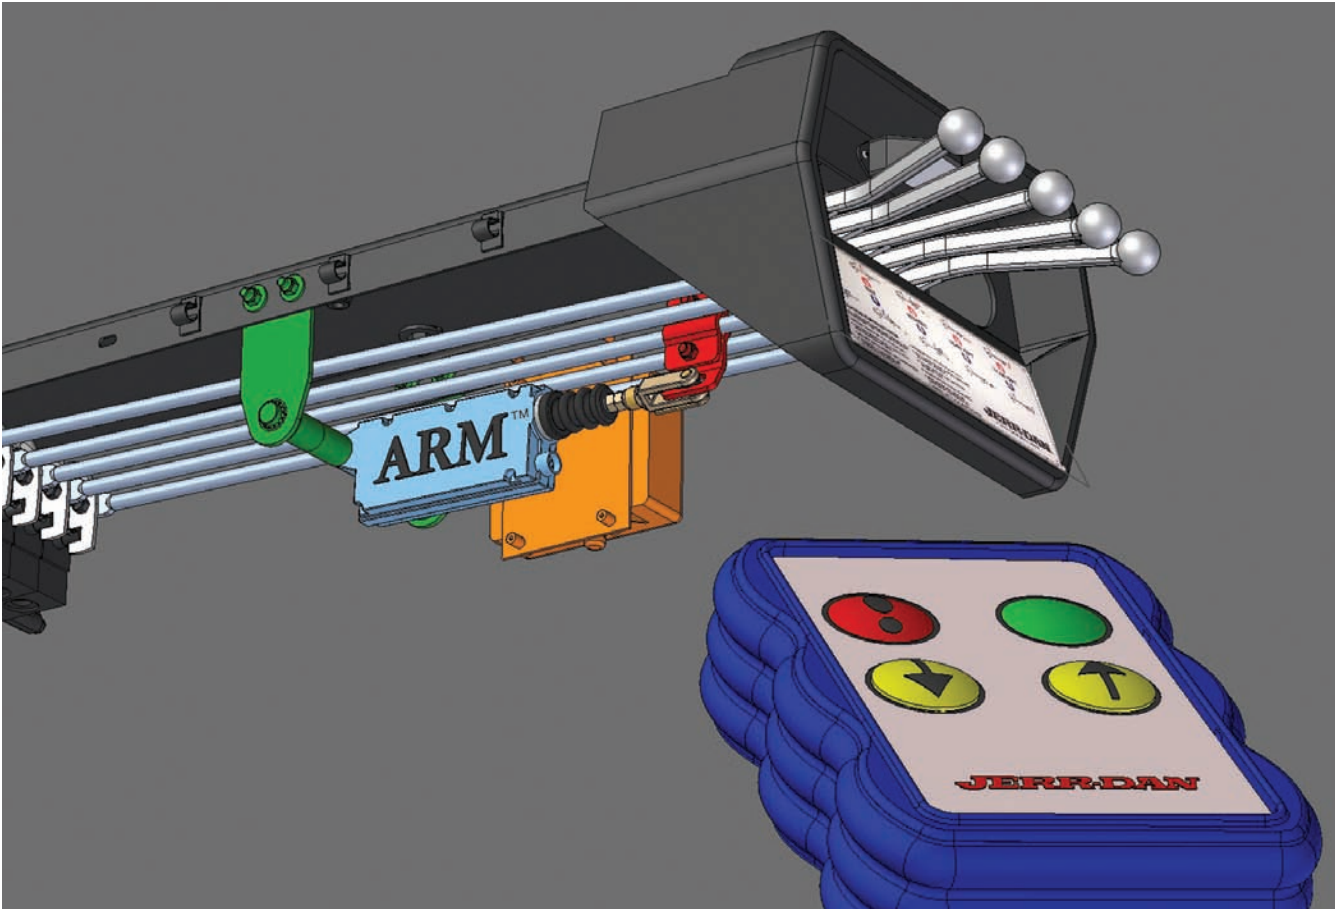

The self-contained ARM system can be added to control any and all functions—winch, deck, whatever you choose. You select the operations you'd like to be remote controlled using the wireless system, and Jerr-Dan makes it happen. Powered by a single 12-Volt DC power source, it requires no hydraulics or air to operate, and manual operations aren't affected after installation.

Quick and easy installation allows for immediate upgrading of current Jerr-Dan carriers up to 10 years old, and all new carriers have the option of including the simple-to-use ARM system. Plus, it works on non-Jerr-Dan carriers too.

Jerr-Dan stands behind all of its products, from its legendary carriers and wreckers to its latest innovations. The ARM system includes a 2-year "in service" warranty, and it's dustproof and waterproof, so you can rest assured that when you need remote control abilities, it delivers. In addition, the ARM system is more affordable than you may think.

Tough as nails. Smart design. And it won't break the bank. See this industry-changing innovation in action at www.jerr-dan.com or call 800-926-9666 to find the distributor nearest you.

AUTOMATED REMOTE MECHANISM (ARM™)
