

Tool & Rigging Kits

In order to support the growing demand of incident management and quick clearance programs around the country, Jerr-Dan is pleased to announce the availability of Heavy Duty Wrecker tool and rigging kits. The base Incident Management Package was developed around the Florida Rapid Incident Scene Clearance (RISC) program that requires towing companies to carry a significant amount of tools and rigging to rapidly clear the scene of a traffic incident.

Incident Management Base Package

The Incident Management Base tool and rigging package contains many or all of the items needed to comply with state incident management programs being implemented across the country.

Rugged Kit

The rugged kit was developed to supplement the base package for customers who require additional rigging, snatch blocks and chains for those severe duty jobs, including sea containers, construction equipment, cement mixers and refuse bodies, along with additional recovery equipment and supplies to perform fuel tanker recoveries.

Spreader Bar Kit

The spreader bar kit was developed to further supplement the base package that includes a 112" spreader bar and bridles for sensitive picks.
